Deep models have shown strong results on many benchmarks. In this section we describe the method, the training setup and the evaluation protocol in detail. We compare against strong baselines and report mean and standard deviation over five random seeds. Results are summarised in Table 1 and discussed below.

Deep models have shown strong results on many benchmarks. In this section we describe the method, the training setup and the evaluation protocol in detail. We compare against strong baselines and report mean and standard deviation over five random seeds. Results are summarised in Table 1 and discussed below.

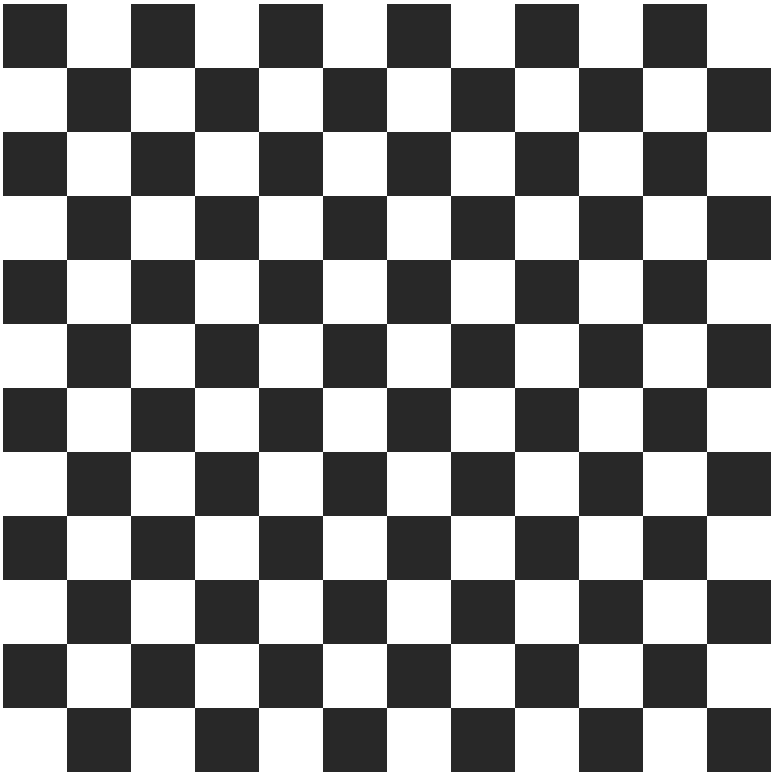
Building on our previous work [3], we extend the model. As shown in Figure ?? the loss decreases.



3 Section 3

Deep models have shown strong results on many benchmarks. In this section we describe the method, the training setup and the evaluation protocol in detail. We compare against strong baselines and report mean and standard deviation over five random seeds. Results are summarised in Table 1 and discussed below.

We compare against strong baselines and report mean and standard deviation over five random seeds. Results are summarised in Table 1 and discussed below.

The baseline of [?] is weaker. See also https://huggingface.co/alexplaceholder for weights.

Acknowledgments

We thank the Exampleton Robotics Lab for compute. This work was funded by grant 12345.
